

What is claimed is:

1. A stator (1), in particular for an electrical internal rotor motor,
comprising at least one stator pole tooth (7),
comprising at least one preassembled coil (11) that is slid onto the stator
pole tooth (7) and secured to it,
wherein
the coil (11) is secured to the stator pole tooth (7) by means of a pole shoe
(15).
2. The stator according to Claim 1,
wherein
a coil form (28) is located on the pole shoe (15).
3. The stator according to Claim 1 [or 2],
wherein
the pole shoe (15) is made of a magnetically soft solid material.
4. The stator according to [one or more of the Claims 1 through 3] claim 1,
wherein
the coil form (28) is integrally extruded on the pole shoe (15).
5. The stator according to Claim 3 [or 4],
wherein
the coil form (28) comprises at least one electrical connecting element
(34).
6. The stator according to Claim 5,
wherein
the electrical connecting element (34) is a pin (38).
